Projects

Steris - Atlas

- Standardized Frontend Components: Consolidated common code for Grid and Form screens, significantly reducing lines of code and simplifying future screen creation by passing parameters to reusable components.
- LDAPS Integration & Authentication Resolution: Implemented LDAPS and addressed authentication challenges, ensuring seamless login processes by differentiating between LDAP and Security_User authentication.
- Package and Version Upgrades: Upgraded React and Node packages, enhancing application stability and performance.
- PDF Download Implementation: Developed a feature for PDF downloads with date filters, utilizing client-provided executable applications.
- Message Popup Resolution: Solved technical issues with socket.io to ensure specific user-targeted popup messages, improving user experience.

JAM Labs - Media Management

- Annotation Features on Media: Implemented advanced image and video annotations (crop, flip, saturation, brightness) over canvas, enhancing media management capabilities.
- Microsoft SSO Authentication: Integrated Microsoft Single Sign-On (SSO) for streamlined user authentication.

- Responsive Design Handling: Ensured application responsiveness across various resolutions (1920x1080 and 1366x768).
- SonarQube Issue Resolution: Addressed SonarQube issues for modules implemented by team members, maintaining code quality as per client requirements.

PCX

- UI Bug Fixes: Identified and resolved user interface bugs, improving overall application usability.
- New Tech Stack R&D: Conducted research and development on the new tech stack (Next.js with TypeScript for frontend and NestJS for backend), successfully meeting client requirements.

VOLZA

- Locofy AI Code Integration: Integrated and stitched Locofy AI code with the existing application, ensuring seamless functionality.
- Thematic and Screen Updates: Contributed to task releases involving application theme changes and new screen developments.
- Optimized Responsive Design: Managed responsive design across four desktop resolutions (1920x1080, 1600x900, 1366x768, and 1280x720), optimized CSS to reduce bundle size, resulting in a 20% decrease in application load time.

JAM Labs - DIPS

- High Charts Optimization: Worked on high chart-related issues, optimizing Elasticsearch queries under the guidance of the tech lead and modifying node and react code to enhance data processing times.
- Telemetry Data Screen Creation: Developed screens for telemetry data, including task creation that runs at specified intervals.
